

Tapered Roller Bearings

Single row tapered roller bearing

Double row tapered roller bearing

1. Types, design features, and characteristics

Tapered roller bearings are designed so the tapered vertex of the raceway surfaces of the inner and outer rings and rollers converge at one point on the centerline of the bearing (see Fig. 1).

The tapered rollers are guided by the combined force of the inner and outer raceway surfaces which keep the rollers pressed up against the large rib on the inner ring.

A large variety of these bearings, including single, double, and four row arrangements, are

available in both metric and inch series. Each type and associated characteristics are shown in Table 1. For four-row tapered roller bearings, see section "C. Special application bearings."

Fig. 1

Table 1 Tapered roller bearing types and characteristics

Type	Characteristics									
Single row tapered roller bearings	(1) There are both metric and inch series adhering to the standards shown in the following table. Dimension series <table border="1"> <thead> <tr> <th></th> <th>Metric series</th> <th>Inch series</th> </tr> </thead> <tbody> <tr> <td>Standard</td> <td> <ul style="list-style-type: none"> ● JIS B 1534 ● JIS B 1512-3 ● ISO 355 </td> <td> <ul style="list-style-type: none"> ● ABMA (includes metric J-series) </td> </tr> <tr> <td>Basic number</td> <td>Example, 30210 * T2EE040</td> <td>Inner ring no. / outer ring no. ("J" appears at the beginning of the basic number in the case of J-series.)</td> </tr> </tbody> </table> <p>* Dimension series previously not covered by 3XX are regulated under JIS B 1512-3; dimensions previously missing from 3XX will henceforth use the bearing number.</p>		Metric series	Inch series	Standard	<ul style="list-style-type: none"> ● JIS B 1534 ● JIS B 1512-3 ● ISO 355 	<ul style="list-style-type: none"> ● ABMA (includes metric J-series) 	Basic number	Example, 30210 * T2EE040	Inner ring no. / outer ring no. ("J" appears at the beginning of the basic number in the case of J-series.)
		Metric series	Inch series							
Standard	<ul style="list-style-type: none"> ● JIS B 1534 ● JIS B 1512-3 ● ISO 355 	<ul style="list-style-type: none"> ● ABMA (includes metric J-series) 								
Basic number	Example, 30210 * T2EE040	Inner ring no. / outer ring no. ("J" appears at the beginning of the basic number in the case of J-series.)								
	(2) In addition to the standard design, there are also medium contact angle and large contact angle types, denoted by the contact angle codes at the end of the part numbers (C and D, respectively). (3) Subunits Tapered roller bearings can be disassembled into parts: the inner ring, rollers, and cage (collectively known as the "CONE") and the outer ring (known as the "CUP"). These are the bearing's "subunits". Subunit dimensions are standardized under ISO or ABMA standards, and unified subunits are interchangeable within each dimensional standard. However, high precision grade bearings are generally not interchangeable, and these subunits must be used by assembling only subunits with identical manufacturing numbers. Aside from any cautionary notes that may appear, the single row tapered roller bearings listed in the dimension tables have subunits standardized for both metric and inch systems (including J series) (see Fig. 2). <div style="display: flex; align-items: center;"> <div style="margin-right: 20px;"> <p>Subunit dimensions</p> <p>E : Outer ring (cup) nominal small-end diameter</p> <p>α : Nominal contact angle</p> </div> </div>									

Fig. 2

Continued to the next page →

Table 1 (continued)

Type	Characteristics
Single row tapered roller bearings	<p>(4) These bearings are constructed to have a high capacity for radial loads, axial loads, and combined loads. The larger the contact angle, the greater the axial load capacity. When a pure radial load is applied to a tapered roller bearing, an induced load in the axial direction is also generated, so these bearings are generally used in pairs.</p> <p>(5) Single row tapered roller bearings are separable, so both the inner and outer rings can be used with tight fits.</p> <p>(6) Tapered roller bearings are also manufactured with flanges attached to the outer rings. For more details, contact NTN Engineering (see Fig. 3).</p>
Duplex tapered roller bearings	<p>(1) When two single-row tapered roller bearings are to be used in combination, the bearing clearance and preload are adjusted by the inner ring spacer or the outer ring spacer (see Fig. 4).</p> <p>(2) A product number and a combination code are indicated on inner rings, outer rings, and spacers. Parts displaying the same number and code must be used in combination.</p> <p>(3) For the axial internal clearance, refer to Table 8.14 in "8. Bearing internal clearance and preload" (A-96).</p>
Double row tapered roller bearings	<p>(1) Back-to-back arrangement (using double row outer rings) and face-to-face arrangement (using double row inner rings) are both available. The assemblies have been adjusted so that each type's internal clearance values are fixed. Only parts with identical manufacturing numbers can be used and they must be assembled according to their code numbers (see Fig. 5).</p> <p>(2) For the axial internal clearance, refer to Table 8.14 in "8. Bearing internal clearance and preload" (A-96).</p>

2. Standard cage type

In general, pressed cages (see **Fig. 6**) are used in tapered roller bearings. For large sized bearings, machined or pin type cages may also be used, while resin cages may also be used for smaller sized bearings.

Fig. 6 Pressed cage

3. Allowable misalignment

In order to avoid edge loading and potential for premature failure, the maximum allowable misalignment based on bearing series can be found below.

The allowable misalignment of combined bearings is influenced by the load center position, so please consult **NTN Engineering**.

- Single row (standard) 1/ 2 000
- Single row (ULTAGE) 1/ 600

4. Precautions

If bearing load is light during operation, or if the ratio of axial to radial load for duplex and double row bearings exceeds the value of e , slipping may develop between the rollers and raceway surface, sometimes resulting in smearing. The mass of rollers and cages particularly tends to be large for large tapered roller bearings. For additional details, please contact **NTN Engineering**.

In tapered roller bearings, the cage may protrude beyond the inner and/or outer ring side faces. Care should be taken when designing the housing and shaft to ensure contact with the cage does not occur.

5. Tapered roller bearings ULTAGE series

ULTAGE series tapered roller bearings are the products developed to meet the demands of "long operating life," "improved load capacity," and "higher speed" required for various types of industrial machinery.

For details, see the special catalog "**ULTAGE series Large Size Tapered Roller Bearings [Metric](CAT. No. 3035/E)**."

1) Smallest allowable dimension for chamfer dimension r or r₁.
2) Bearings with a ○ mark do not incorporate the subunit dimensions.

Tapered Roller Bearings

Dynamic equivalent radial load

$$P_r = X F_r + Y F_a$$

$\frac{F_a}{F_r} \leq e$		$\frac{F_a}{F_r} > e$	
X	Y	X	Y
1	0	0.4	Y ₂

Static equivalent radial load

$$P_{0r} = 0.5 F_r + Y_0 F_a$$

When $P_{0r} < F_r$ use $P_{0r} = F_r$.

For values of e, Y₂

and Y₀ see the table below.

1) Smallest allowable dimension for chamfer dimension r or r₁.
 2) Bearings with a ○ mark do not incorporate the subunit dimensions.

Tapered Roller Bearings

Dynamic equivalent radial load

$$P_r = X F_r + Y F_a$$

$\frac{F_a}{F_r} \leq e$		$\frac{F_a}{F_r} > e$	
X	Y	X	Y
1	0	0.4	Y ₂

Static equivalent radial load

$$P_{0r} = 0.5 F_r + Y_0 F_a$$

When $P_{0r} < F_r$ use $P_{0r} = F_r$.

For values of e, Y₂

and Y₀ see the table below.

1) Chamfer dimensions of the bearings marked "*" are shown in the above drawings.

Tapered Roller Bearings

Inch series
J series

Tapered Roller Bearings

Dynamic equivalent radial load

$$P_r = X F_r + Y F_a$$

$\frac{F_a}{F_r} \leq e$		$\frac{F_a}{F_r} > e$	
X	Y	X	Y
1	0	0.4	Y_2

Static equivalent radial load

$$P_{0r} = 0.5 F_r + Y_0 F_a$$

When $P_{0r} < F_r$ use $P_{0r} = F_r$.

For values of e , Y_2 and Y_0 see the table below.

d 34.925–38.100 mm

d	Boundary dimensions				Basic load rating		Allowable speed	
	mm				dynamic	static	min ⁻¹

Note: Chamfer dimensions on the back face of the inner and outer rings of the bearing are larger than the maximum values of installation-related dimensions r_{1as} and r_{as} .
1) As for the maximum value for inner and outer ring diameters of bearings whose bearing numbers are marked with "†" (inner ring) and "††" (outer ring), the precision class is an integer for Class 4 and Class 2 bearings only.

Bearing number ¹⁾²⁾	Installation-related dimensions						Load center ⁴⁾	Constant	Axial load factors		Mass kg

2) Bearing numbers marked with "#" designate J-series bearings. The tolerance of these bearings is listed in Table 6.8 on page A-66 to A-67.
3) Chamfer dimensions of the bearings marked "*" are shown in the above drawings.
4) Dimensions with "-" indicate a load center at the outside of an inner ring.

	76.200	22.225	23.020	17.462	72.0	80.5	4 900	6 500
	76.200	25.400	25.400	20.638	85.0	97.5	4 800	6 400
	79.378	23.812	25.400	19.050	85.0	97.5	4 800	6 400
	80.000	18.009	17.384	14.288	47.0	51.5	4 900	6 500

Note: Chamfer dimensions on the back face of the inner and outer rings of the bearing are larger than the maximum values of installation-related dimensions r_{1a} and r_{1b} .
 1) As for the maximum value for inner and outer ring diameters of bearings whose bearing numbers are marked with "I" (inner ring) and "II" (outer ring), the precision class is an integer for Class 4 and Class 2 bearings only.

Tapered Roller Bearings

Dynamic equivalent radial load

$$P_r = XF_r + YF_a$$

$\frac{F_a}{F_r} \leq e$		$\frac{F_a}{F_r} > e$	
X	Y	X	Y
1	0	0.4	Y_2

Static equivalent radial load

$$P_{0r} = 0.5F_r + Y_0F_a$$

When $P_{0r} < F_r$ use $P_{0r} = F_r$.

For values of e , Y_2

and Y_0 see the table below.

Bearing number ¹⁾	Installation-related dimensions						Load center ³⁾ mm	Constant e	Axial load factors		Mass kg (approx.)

Note: Chamfer dimensions on the back face of the inner and outer rings of the bearing are larger than the maximum values of installation-related dimensions r_{1a} and r_{1as} .
1) As for the maximum value for inner ring bore diameters of bearings whose bearing numbers are marked with "*" (inner ring), the precision class is an integer for Class 4 and Class 2 bearings only.

Tapered Roller Bearings

Dynamic equivalent radial load
 $P_r = XF_r + YF_a$

$\frac{F_a}{F_r} \leq e$		$\frac{F_a}{F_r} > e$	
X	Y	X	Y
1	0	0.4	Y_2

Static equivalent radial load

$P_{0r} = 0.5F_r + Y_0F_a$
When $P_{0r} < F_r$ use $P_{0r} = F_r$.
For values of e , Y_2
and Y_0 see the table below.

Bearing number ¹⁾²⁾	Installation-related dimensions						Load center ³⁾	Constant	Axial load factors		Mass

1) Bearing numbers marked "#" designate J-series bearings. The tolerance of these bearings is listed in Table 6.8 on page A-66 to A-67.
2) Dimensions with "-" indicate a load center at the outside on the end of an inner ring.

Tapered Roller Bearings

Note: Chamfer dimensions on the back face of the inner and outer rings of the bearing are larger than the maximum values of installation-related dimensions r_{1a} and r_{1as} .
1) As for the maximum value for inner and outer ring diameters of bearings whose bearing numbers are marked with "†" (inner ring) and "††" (outer ring), the precision class is an integer for Class 4 and Class 2 bearings only.

Tapered Roller Bearings

Dynamic equivalent radial load
 $P_r = X F_r + Y F_a$

$\frac{F_a}{F_r} \leq e$		$\frac{F_a}{F_r} > e$	
X	Y	X	Y
1	0	0.4	Y_2

Static equivalent radial load

$P_{0r} = 0.5 F_r + Y_0 F_a$
When $P_{0r} < F_r$ use $P_{0r} = F_r$.
For values of e , Y_2
and Y_0 see the table below.

1) Smallest allowable dimension for chamfer dimension r or r₁.

● Double Row Tapered Roller Bearings

Dynamic equivalent radial load

$$P_r = XF_r + YF_a$$

$\frac{F_a}{F_r} \leq e$		$\frac{F_a}{F_r} > e$	
X	Y	X	Y
1	Y ₁	0.67	Y ₂

Static equivalent radial load

$$P_{0r} = F_r + Y_0 F_a$$

For values of e, Y₁, Y₂ and Y₀ see the table below.

Bearing number ²⁾	Installation-related dimensions						Load center mm a	Constant e	Axial load factors			Mass kg (approx.)
	d _a Max.	d _a Max.	D _a Min.	S _a Min.	r _{1as} Max.	r _{as} Max.			Y ₁	Y ₂	Y ₀
